which enables end-users to record Meta Data such as POS information, industrial process, account number, any transaction, access control or ANPR. A click on the event will show the video linked to it. Digipryn V5 comes with a RS485 output to control any Tub camera or Bulle camera/speed dome camera without any additional hardware. The company also provide a powerful DVR with full duplex audio transmission for remote video centre and 8 synchronised video/audio channels to guarantee non challenging evidence between audio and video. Dual compression is used: MPEG4 and/or JPEG on each channel. For additional flexibility and increased system integration, the product is a fully hybrid DVR. It can record analogue and IP cameras simultaneously. With EVT function (Easy Video Transfer), secured video can be transfered without having the need to download any specific software to view the video while still providing integrity of the video recorded.
